

AMENDMENTS TO THE CLAIMS

The following listing of claims will replace all prior versions and listings of claims in the application:

- 1.-17. (Canceled).
18. (Previously Presented) A mobile terminal for a wireless communication system comprising:
 - a graphical user interface to receive user inputs to define a user zone, the user zone comprising a desired area of operation to subscribe to wireless service options;
 - wherein the mobile terminal is adapted to transmit vector information related to the user zone to a network controller within said wireless communication system.
19. (Previously Presented) A mobile terminal according to claim 18 wherein the user-zone comprises a desired area of operation of the mobile terminal for a temporary duration.
20. (Previously Presented) A mobile terminal according to claim 18 wherein said vector information comprises at least one radius or distance vector with respect to said mobile terminal location.
21. (Previously Presented) A mobile terminal according to claim 18 comprising a stylus or keypad input device for inputting said user inputs.
22. (Previously Presented) A mobile terminal according to claim 18 wherein said mobile terminal is adapted to receive location information related to a location of the mobile terminal, wherein the graphical user interface is adapted to display a map in response to the location information.
23. (Previously Presented) A mobile terminal according to claim 22 wherein said location information is received at said mobile terminal from said wireless communication system.

24. (Previously Presented) A mobile terminal according to claim 22 comprising a GPS receiver, and wherein said location information is provided by said GPS receiver.
25. (Previously Presented) A mobile terminal according to claim 18, wherein the graphical user interface is operable to display a map including street and landmark information.
26. (Previously Presented) A mobile terminal according to claim 25 wherein the user input is input by at least one of a track-ball, touch screen, light pen, mouse, keypad or stylus.
27. (Previously Presented) A mobile terminal according to claim 18 wherein said mobile terminal is adapted to transmit a request for communication services within the user zone.
28. (Previously Presented) A mobile terminal according to claim 18, wherein the user inputs define at least one user-selected vector that represents a radius defining a circle about said mobile terminal.
29. (Previously Presented) A mobile terminal according to claim 27, wherein said request includes a request for voice and data communication services.
30. (Previously Presented) A mobile terminal according to claim 27 wherein said request for communication services is transmitted to a plurality of network controllers each associated with a communications service provider.

31. (Previously Presented) A method of requesting communication services by a user within a user-defined user zone, the method comprising:
determining a location of a mobile terminal of a user by receiving GPS data at said mobile terminal;
providing a display map related to the location for user interaction;
defining a desired area with respect to the location in response to the user interaction;
transmitting information related to the desired area to at least one wireless communication service provider; and
receiving from at least one wireless communication service provider wireless communication services within said desired area.
32. (Previously Presented) The method of claim 31, further comprising transmitting from the mobile terminal a request for data transmission services to at least one wireless communication service provider.
33. (Previously Presented) The method of claim 31 wherein defining a desired area includes referencing at least one user-selected vector representing a radius defining a circle of service from the location of the mobile terminal.
34. (Canceled).
35. (Canceled).
36. (Previously Presented) The method of claim 31 wherein determining a location of said mobile terminal includes receiving location information at said mobile terminal from the at least one wireless communication service provider.
37. (Previously Presented) The method of claim 36 wherein defining a desired area includes inputting at least one user-selected vector on a display map.

38. (Previously Presented) A communications device comprising:
a graphical user interface to display location information and to receive user inputs to
select a desired user zone of service; and
a transceiver to transmit information related to the desired user zone of service to one or
more wireless service providers and to receive one or more responses from the
one or more wireless service providers;
wherein the graphical user interface is adapted to display upon user selection the one or
more responses to subscribe to a selected one of the one or more wireless service
providers.
39. (Previously Presented) The communications device of claim 38, wherein the location
information comprises a map.
40. (Previously Presented) The communications device of claim 39, wherein the desired user
zone is independent from a location of the communications device.
